

# Future London.

**We want to build a sustainable legacy for our great capital city with positive social impact at its heart, whilst also supporting a thriving economy for London's future.**

There are huge social, environmental and economic challenges in London, with some of the most disadvantaged communities in the UK located within the central London boroughs in which we are working. Our Social Impact Strategy sets out our priorities, how we can make a difference and how a focus on social impact can bring business benefits. It also details the actions we will take and how we will hold ourselves to account. We aim to have regular engagement with community groups and our other stakeholders to learn, and further adapt our approach, as we progress towards achieving our vision to 'create a lasting positive impact in our communities'.
